

# PALM TREE FERTILIZATION

239.643.4471 or [service@greenscapesfl.com](mailto:service@greenscapesfl.com)

## NUTRITIONAL DEFICIENCIES

- Most ornamental palms should be fertilized three times per year with a granular fertilizer.
- In some cases, fertilizer uptake may not occur due to high soil pH, limited bed space, or proximity to turf grass. This can cause a nutritional deficiency and a need for an injection.
- Trunk injections can range from \$50 - \$125 per injection depending on the size of the palm tree. Three injections per calendar year may be needed. An injection does not guarantee the palm will recover. It is important to note that deficient fronds will not recover. Recovery of new fronds can take several months and should improve as each new frond emerges.

# Before and Afters
